

THANKS TO GRANULES INDIA LTD

B Abhinava Malya/F

Abhinava, at the age of one year, developed fever and pneumonia and was hospitalized for a week, in their village Jagitjala, Telangana. However, a 2D echocardiogram revealed a hole and a leakage in her heart. Doctors advised the parents Srinivas and Srilatha, to wait for some time as the child is too young and needs to gain weight. They did wait for a few years, but their daughter's activity level continued to be the same. Worried and confused parents didn't know what to do. Now she is 8 years old. One girl in the neighborhood had a cardiac condition and was treated at STAR hospitals with the help of the Hrudaya Foundation, which they had learned about. They approached both the foundation and the hospital.

Doctors at STAR Hospital evaluated the girl and informed the parents that Abhinava needs surgery as soon as possible. The child had undergone ASD Surgical Closure on April 24, 2024, with sponsorship from Granules India. Abhinava is now fine and leading a healthy, happy life.
